

CYBERSAFE SOLUTIONS

FAST FACTS

It's not a matter of if your systems will be attacked. It's when. Cybersafe's Security Operations team understands the threat landscape and the adversaries within it. Our knowledgeable, certified security specialists are at the ready, employing cutting-edge technology, top-tier threat intelligence, and 20+ years of cybersecurity experience to combat the threats of today and tomorrow.

That is why Cybersafe offers Threat 360 as our most comprehensive continuous security monitoring solution. It provides real-time visibility into your organization's network, cloud, and endpoints so that our team of experts can respond to and contain threats as soon they are detected. You can focus on your day-to-day operations while leaving the complex and time-consuming cybersecurity tasks to us.

1. Cybersafe Solutions is a global Managed Security Service Provider (MSSP) with a US-based 24/7/365 Security Operations Center (SOC) that delivers advanced cybersecurity solutions to align with each client's unique business risk.

2. We understand that your cybersecurity program is only as strong as the team standing behind it. That is why our commitment will always remain the same: to be a client-centric, value-driven firm that utilizes best-of-breed technology to act as an extension of our clients' teams.

3. Cybersafe understands that all clients are different and require a customized solution with unique alerting and escalation procedures.

4. Our complete solution covers the three main attack vectors: the endpoints, the network, and the cloud.

5. We offer one of the most comprehensive solutions on the market. By incorporating an advanced multilayered solution, our SOC detects, responds, and contains cyberattacks across a far wider scope than the competition.

6. Client experience is a critical component of our service. Through unparalleled client care, we develop and retain long-term relationships.

7. Cybersafe continuously improves its solutions and incorporates dynamic security and detection controls to identify even the stealthiest attacks. For instance, we utilize Deception Technology for a defense in depth (DiD) approach.

8. Cybersafe's Continuous Security Monitoring offers real-time alerting and live response (containment) of cyber events. Our experienced analysts review, investigate, and dispatch every alarm. Cybersafe includes unlimited remote incident response on all covered assets.

9. Clients can trust that each time they hear from our SOC, it is actionable, important, and vetted to include remediation guidance. Through a robust learning and tuning phase, our team truly becomes an extension of our clients, enabling us to act quickly when something deviates from the norm.

10. Cybersafe's delivery model includes daily communication, monthly status calls (if required), and quarterly Health Check Reports in which we discuss security activity and opportunities to improve the overall security posture of our client's environment.
