# SENSE4

Your partner in  
productivity for the  
**manufacturing industry**

Sense 4 is a solution based on the Internet of Things of last generation, which allows the industry managers to monitor the productivity of their industrial machinery in real time, so they can make well informed decisions about how to improve their equipment availability and to reduce their energy bills, while sustaining and improving the profitability.

# Take your company to the top of its productivity.

## Sense 4 makes it easy without sacrificing the profitability.

- The Sense 4 solution adapts easily to any type of industrial machinery and monitors in a wireless way the energy usage and consumption in real time.
- Connect easily to any production equipment in any place in only a few minutes.
- The information uploads in the Sense 4 cloud-based servers and it is available for their immediate analysis.
- Start your online session in the Sense 4 web suite and watch your machines, productive areas or productivity levels of your company live.

## 3 step easy installation

1

Connect the wireless Sense 4 sensors to the electrical equipment box.

2

Machine states are configured in your online suite.

3

Access your online account and gain performance of your equipment.

**SENSE**  **4**

## Main **functions**

- Supervise your equipment in real time with a modern interface, totally visual and compatible with mobile devices.
- Analyze the functioning states of the machine.
- Consult last periods, last turns and compare the performance of the machine through a dashboard.
- Customize downtime or failure alerts.
- Drill down into root cause analysis by company, area, machine, and period using Sense 4 analysis tools.
- Get four levels of analysis: Live, Last Shifts, Last Production Logs, and General Company.
- Automatically connect your administrative and production software directly to the Sense 4 platform for an end-to-end experience.
- Additional sensor inputs to monitor production, activities and variables.

## Benefits

Increase the availability of assets with a convenient monthly fee to access.

Reduce energy consumption in production processes.

Connect from anywhere, anytime and from any device.

Avoid downtime.

Increase the overall productivity of the company.
